## Clinical Research Methods in Speech-Language Pathology and Audiology

By David Irwin, Mary Pannbacker, Norman J. Lass

Written for graduate students and practicing clinicians, this textbook, now in its second edition, provides comprehensive knowledge about understanding and conducting clinical research. Specifically, readers will learn to understand the strengths and weaknesses of different research methodologies, apply the results of research to clinical practice and decision making, and understand the importance of research ethics.

Importantly, this is the only book to take into account qualitative research and evidence-based practice, and to provide a detailed discussion of research ethics. For the second edition, the authors have updated and expanded the content. New and expanded topics include:

- HIPAA and its impact on research
- Knowledge and skills needed for evidence-based research
- Application of revised Codes of Ethics to research: AAA (2011) and ASHA (2010)
- Comparison of ASHA (2005) and (2007) levels of evidence
- Chronology of research misconduct in the United States
- Organizational support for evidence-based practice
- Framing questions: PICO and PESICO
- Research utilization
- Information literacy
- Use of social networking as a research database
- Using single-subject design for ASD subjects

In addition, the chapter on research grants includes an updated and expanded list of potential funding sources for grant-seeking purposes, both online and text-based, for federal, foundation, association, and corporate research grants.

With its updated content and many new features, *Clinical Research Methods in Speech-Language Pathology and Audiology, Second Edition* is an excellent choice for students and professionals seeking to increase their knowledge of research in communication sciences and disorders.

### **Editorial Review**

#### Review

"This is an excellent resource for anyone interested in research. The inclusion of information on ethics, grant writing, treatment outcomes, and evidence-based practice as well as the more standard information on design and statistics set this apart from other research design books. The text is well organized, and the writing is clear and understandable. It would make an excellent textbook for a research design course. [Refers to First Edition] --Sheila V. Stager, BSc, MS, MS, PhD (Voice Treatment Center), Doody's Review Service, (2008)

...While there are a number of very good texts that are written for our discipline most of which are referenced in this book no one text I have used has covered the broad number of topics I want students to learn in my course. That was true until I was able to review *Clinical Research Methods in Speech-Language Pathology and Audiology* (2nd ed.) by Irwin, Pannbacker, and Lass, a text I had not previously examined. *Clinical Research Methods ...* contains 14 well-written and well-referenced chapters. The text is easy to read, even for students encountering these concepts for the first time. Chapter topics cover the gamut from an introduction to research to the evaluation of tests and treatments to coverage of issues related to research proposals and grants. The authors appear to have written the text both for students (future clinicians) who need to learn how to evaluate research in the discipline in order to apply it to practice, and for potential investigators. These dual purposes are difficult to balance, but Irwin, Pannbacker, and Lass do a fine job in maintaining clear explanations and providing a depth of content important for both audiences. The formatting and style of each chapter are especially helpful for readers.... Some chapters stand out as particular assets to users: The chapter on research ethics is well-researched and thoughtful. The inclusion of a chapter on multimethod research may be ahead of publications in the field due to the apparent dearth of such studies in speech language pathology and audiology. Particularly helpful is the information contrasting narrative reviews, systematic reviews, and meta-analyses.... *Clinical Research Methods in Speech-Language Pathology and Audiology* (2nd ed.) by Irwin, Pannbacker, and Lass is a comprehensive introductory text written for students in communication disorders and for potential investigators. I recommend it for a graduate course in research methods because of its broad range of covered topics, helpful pedagogical features, and extensive references. This text will be on my book adoption order for next year!" --Gail B. Kempster, *International Journal of Audiology* (2014)

"This book is a comprehensive description of modern clinical research methods. It is primarily written with the student in mind and assumes little prior knowledge. However any audiologist returning to research after a break would benefit from it. If you just plan to contribute to the profession by doing a bit of research of a practical or enquiring kind, there is a lot in the book for you....

The book's main advantage over other research methods texts for the Australian Audiologist is the use of examples of research that are relevant to us. This makes it easier to engage with the concepts as they are presented. The text is highly structured with each chapter having an outline, learning objectives, introduction, content, summary, discussion questions and excellent references. The structure makes it highly suitable as a textbook for audiology courses. It is well written and clear in its explanations....

Overall, this is an excellent text, that it has come to a second edition alone highly recommends it. It is a complete, structured description of modern clinical research methods. It is highly recommended as preparation for anyone planning to do research of a primary or secondary kind or even if they just want to start reading a bit more of the literature in their field. It could easily be used as the basis for a course at an

undergraduate or post graduate level. But it is more- it is relevant to modern clinical practice and extremely encouraging and positive about the outlook for professions that get involved in research." --Chris Whitfeld, BSC, MA, AudiologyNow (2013)

About the Author

**Dr. David Irwin** has a doctorate in speech-language pathology from the University of Oklahoma Health Sciences Center. He is retired from Louisiana State University Health Sciences Center as Professor and Head of the Children's Center.

## **Users Review**

**From reader reviews:**

**Sarah Ford:**

Have you spare time for the day? What do you do when you have more or little spare time? Yes, you can choose the suitable activity to get spend your time. Any person spent all their spare time to take a walk, shopping, or went to the particular Mall. How about open or maybe read a book entitled Clinical Research Methods in Speech-Language Pathology and Audiology? Maybe it is being best activity for you. You understand beside you can spend your time with the favorite's book, you can wiser than before. Do you agree with the opinion or you have various other opinion?

**Jerry Orosco:**

Why? Because this Clinical Research Methods in Speech-Language Pathology and Audiology is an unordinary book that the inside of the reserve waiting for you to snap this but latter it will surprise you with the secret the idea inside. Reading this book next to it was fantastic author who have write the book in such amazing way makes the content on the inside easier to understand, entertaining way but still convey the meaning fully. So , it is good for you because of not hesitating having this ever again or you going to regret it. This book will give you a lot of rewards than the other book have got such as help improving your expertise and your critical thinking means. So , still want to delay having that book? If I were being you I will go to the reserve store hurriedly.

**Tony Partee:**

As a pupil exactly feel bored to reading. If their teacher inquired them to go to the library or even make summary for some e-book, they are complained. Just minor students that has reading's heart and soul or real their leisure activity. They just do what the educator want, like asked to go to the library. They go to right now there but nothing reading significantly. Any students feel that examining is not important, boring as well as can't see colorful pics on there. Yeah, it is to be complicated. Book is very important to suit your needs. As we know that on this age, many ways to get whatever you want. Likewise word says, many ways to reach Chinese's country. Therefore this Clinical Research Methods in Speech-Language Pathology and Audiology can make you really feel more interested to read.

**Minnie Rivera:**

E-book is one of source of information. We can add our expertise from it. Not only for students but additionally native or citizen need book to know the change information of year for you to year. As we know those textbooks have many advantages. Beside all of us add our knowledge, can bring us to around the world. From the book Clinical Research Methods in Speech-Language Pathology and Audiology we can acquire more advantage. Don't you to be creative people? To get creative person must prefer to read a book. Merely choose the best book that suitable with your aim. Don't be doubt to change your life at this book Clinical Research Methods in Speech-Language Pathology and Audiology. You can more pleasing than now.
