Programming and Application of a DSP to Control and Regulate Power Electronic Converters: Programming in C++ By Baris Bagci

The purpose of this project has been to study, operate and program the 32-bit 150MIPS TMS320F2812 DSP developed by Texas Instruments Inc. In addition, it has also been a goal to implement fast estimation techniques for control of resonant converters. For this purpose, PWM signals that are generated using this DSP are used. The demands on the system and the hardware to solve the problem were already decided when I started the work. The algorithms were programmed in C/C++ language, compiled, debugged and transferred to the DSP development board in a compiling and simulation tool (downloader), called CCS (Code Composer Studio v2), also provided by Texas Instruments. In the first chapters of this study I give general information about control systems, digital signal processors, digital signal processing and the DSP used in this work. The following chapters tell about PWM, how to configure the PWM outputs and some examples related with PWM signals are given. After a short review of series resonant converters, I presented the last example implemented in this project. I conclude with a summary and provide some hints of future work.

Editorial Review

About the Author

Baris Bagci earned his BSc degree in Electrical and Electronic Engineering in 2001 and his MSc degree in Electrical Engineering in 2003. Since then he worked in different areas from automotive to product testing, renewable energy technologies and high voltage measurement technologies. Having lived in Turkey, Germany and Japan, since 2005 he calls Hong Kong his home. Currently he is active in the electric power industry, providing consultancy services to power utilities across Asia Pacific.

Users Review

From reader reviews:

Rene Pina:

This Programming and Application of a DSP to Control and Regulate Power Electronic Converters: Programming in C++ tend to be reliable for you who want to certainly be a successful person, why. The reason of this Programming and Application of a DSP to Control and Regulate Power Electronic Converters: Programming in C++ can be on the list of great books you must have will be giving you more than just simple looking at food but feed you actually with information that perhaps will shock your preceding knowledge. This book is usually handy, you can bring it just about everywhere and whenever your conditions throughout the e-book and printed ones. Beside that this Programming and Application of a DSP to Control and Regulate Power Electronic Converters: Programming in C++ giving you an enormous of experience including rich vocabulary, giving you trial of critical thinking that we understand it useful in your day activity. So , let's have it and enjoy reading.

Carolyn Treece:

The book Programming and Application of a DSP to Control and Regulate Power Electronic Converters: Programming in C++ will bring someone to the new experience of reading the book. The author style to clarify the idea is very unique. When you try to find new book to learn, this book very suited to you. The book Programming and Application of a DSP to Control and Regulate Power Electronic Converters: Programming in C++ is much recommended to you you just read. You can also get the e-book through the official web site, so you can quicker to read the book.

Mae Bushee:

The publication untitled Programming and Application of a DSP to Control and Regulate Power Electronic Converters: Programming in C++ is the e-book that recommended to you you just read. You can see the quality of the publication content that will be shown to you actually. The language that creator use to explained their ideas are easily to understand. The writer was did a lot of study when write the book, to ensure the information that they share for you is absolutely accurate. You also might get the e-book of Programming and Application of a DSP to Control and Regulate Power Electronic Converters: Programming

in C++ from the publisher to make you far more enjoy free time.

Adam Mathews:

In this era which is the greater individual or who has ability in doing something more are more precious than other. Do you want to become one of it? It is just simple method to have that. What you have to do is just spending your time almost no but quite enough to have a look at some books. On the list of books in the top checklist in your reading list is usually Programming and Application of a DSP to Control and Regulate Power Electronic Converters: Programming in C++. This book which is qualified as The Hungry Mountains can get you closer in getting precious person. By looking way up and review this publication you can get many advantages.
