Invasive and Introduced Plants and Animals: Human Perceptions, Attitudes and Approaches to Management From Earthscan

There have been many well-publicized cases of invasive species of plants and animals, often introduced unintentionally but sometimes on purpose, causing widespread ecological havoc. Examples of such alien invasions include pernicious weeds such as Japanese knotweed, an introduced garden ornamental which can grow through concrete, the water hyacinth which has choked tropical waterways, and many introduced animals which have out-competed and displaced local fauna.

This book addresses the broader context of invasive and exotic species, in terms of the perceived threats and environmental concerns which surround alien species and ecological invasions. As a result of unprecedented scales of environmental change, combined with rapid globalisation, the mixing of cultures and diversity, and fears over biosecurity and bioterrorism, the known impacts of particular invasions have been catastrophic. However, as several chapters show, reactions to some exotic species, and the justifications for interventions in certain situations, including biological control by introduced natural enemies, rest uncomfortably with social reactions to ethnic cleansing and persecution perpetrated across the globe. The role of democracy in deciding and determining environmental policy is another emerging issue. In an increasingly multicultural society this raises huge questions of ethics and choice. At the same time, in order to redress major ecological losses, the science of reintroduction of native species has also come to the fore, and is widely accepted by many in nature conservation. However, with questions of where and when, and with what species or even species analogues, reintroductions are acceptable, the topic is hotly debated. Again, it is shown that many decisions are based on values and perceptions rather than objective science. Including a wide range of case studies from around the world, his book raises critical issues to stimulate a much wider debate.

Editorial Review

Review

'...a truly momentous, provocative and at times, hilarious analysis of the incredibly complex, controversial and conflict-ridden world of invasive and introduced plants and animals. In bridging the gap between objective science and subjective sociocultural fashions and values, this compelling tome dares to go 'where no one has gone before', with its rich and diverse consideration of the multi-faceted issues surrounding species invasions and introductions. Be warned! After devouring this, you'll never look at plants and animals in quite the same way ever again... This is a clarion call - no more excuses.' - Sarah Simons, Executive Director, Global Invasive Species Programme.

'An interesting and much-needed book that tackles an important aspect of invasive alien species: how they are perceived, valued and judged by humans. The volume draws together a broad range of fascinating case studies and is very thought-provoking. A must for any serious invasion ecologist.' - Robert A. Francis, King's College London, and Secretary of the British Ecological Society Invasive Species Special Interest Group.

For an ecologist it is a salutary experience to examine this excellent record of the widespread confusion and conflict that has surrounded the human response to invasive species. Is this a humiliating testament to the immature and fragmentary state of our subject or should we admit that local, cultural, economic, political and sentimental forces are more important and will often dictate an unpredictable course of action?' - Professor Philip Grime, University of Sheffield, UK.

'Abounding with parallels with the human world, *Invasive and Introduced Plants and Animals: Human Perceptions, Attitudes and Approaches to Management* is a book to recommend without hesitation.' - Robert Alexander Hearn, University of Genoa, in *Environment and History* (Vol 19, 2013).

'It takes a fresh approach to invasive species by asking to what extent popular perceptions and attitudes conflict with objective science and examining how this conflict affects outcomes.' - Peter Marren, *British Wildlife*

'It is gratifying to find the matter so thoroughly dealt with, especially meeting the issues of xenophobia, arbitrary cut off cut-off points in ecological time, and the often ignored fact that in most parts of Britain and Europe at least, one is dealing with a whole landscape shaped by non-native species.' - Peter Taylor, *ECOS*

About the Author

Ian Rotherham is a leading researcher and writer on ecological history with a long-standing interest in exotic and invasive animals and plants. He is a Reader, Director of the Geography, Tourism, and Environment Research Unit, and International Research Co-ordinator at Sheffield Hallam University, UK.

Rob Lambert has a dual appointment at the University of Nottingham, UK, as lecturer in environmental history and lecturer in tourism and the environment. He is also a Senior Honorary Research Fellow at the University of Western Australia and co-editor of the journal *Environment and History*.

Users Review

From reader reviews:

Elizabeth Wiggins:

Information is provisions for anyone to get better life, information these days can get by anyone in everywhere. The information can be a information or any news even a concern. What people must be consider while those information which is inside former life are challenging be find than now could be taking seriously which one would work to believe or which one the particular resource are convinced. If you get the unstable resource then you buy it as your main information you will have huge disadvantage for you. All those possibilities will not happen with you if you take Invasive and Introduced Plants and Animals: Human Perceptions, Attitudes and Approaches to Management as the daily resource information.

Joyce Jacobs:

This book untitled Invasive and Introduced Plants and Animals: Human Perceptions, Attitudes and Approaches to Management to be one of several books this best seller in this year, this is because when you read this e-book you can get a lot of benefit onto it. You will easily to buy this specific book in the book shop or you can order it through online. The publisher in this book sells the e-book too. It makes you quicker to read this book, since you can read this book in your Mobile phone. So there is no reason to your account to past this publication from your list.

Melissa Sanders:

Reading a book being new life style in this season; every people loves to learn a book. When you study a book you can get a large amount of benefit. When you read textbooks, you can improve your knowledge, simply because book has a lot of information upon it. The information that you will get depend on what kinds of book that you have read. In order to get information about your examine, you can read education books, but if you act like you want to entertain yourself you can read a fiction books, this kind of us novel, comics, and also soon. The Invasive and Introduced Plants and Animals: Human Perceptions, Attitudes and Approaches to Management provide you with a new experience in reading a book.

Stephanie Landa:

This Invasive and Introduced Plants and Animals: Human Perceptions, Attitudes and Approaches to Management is completely new way for you who has curiosity to look for some information mainly because it relief your hunger info. Getting deeper you on it getting knowledge more you know otherwise you who still having small amount of digest in reading this Invasive and Introduced Plants and Animals: Human Perceptions, Attitudes and Approaches to Management can be the light food to suit your needs because the information inside that book is easy to get simply by anyone. These books develop itself in the form and that is reachable by anyone, yep I mean in the e-book web form. People who think that in publication form make them feel drowsy even dizzy this reserve is the answer. So there is not any in reading a reserve especially this one. You can find actually looking for. It should be here for anyone. So , don't miss that! Just read this e-book variety for your better life in addition to knowledge.
