### Legged Robots That Balance (Artificial Intelligence) By Marc Raibert

This book, by a leading authority on legged locomotion, presents exciting engineering and science, along with fascinating implications for theories of human motor control. It lays fundamental groundwork in legged locomotion, one of the least developed areas of robotics, addressing the possibility of building useful legged robots that run and balance.

The book describes the study of physical machines that run and balance on just one leg, including analysis, computer simulation, and laboratory experiments. Contrary to expectations, it reveals that control of such machines is not particularly difficult. It describes how the principles of locomotion discovered with one leg can be extended to systems with several legs and reports preliminary experiments with a quadruped machine that runs using these principles.

Raibert's work is unique in its emphasis on dynamics and active balance, aspects of the problem that have played a minor role in most previous work. His studies focus on the central issues of balance and dynamic control, while avoiding several problems that have dominated previous research on legged machines.

Marc Raibert is Associate Professor of Computer Science and Robotics at Carnegie-Mellon University and on the editorial board of The MIT Press journal, *Robotics Research*. *Legged Robots That Balance* is fifteenth in the Artificial Intelligence Series, edited by Patrick Winston and Michael Brady.

### **Editorial Review**

### **Users Review**

#### **From reader reviews:**

##### **Betty Borgen:**

Information is provisions for anyone to get better life, information today can get by anyone with everywhere. The information can be a know-how or any news even an issue. What people must be consider while those information which is from the former life are challenging be find than now is taking seriously which one works to believe or which one the particular resource are convinced. If you obtain the unstable resource then you buy it as your main information there will be huge disadvantage for you. All of those possibilities will not happen within you if you take Legged Robots That Balance (Artificial Intelligence) as your daily resource information.

##### **Pete Dominguez:**

The reserve with title Legged Robots That Balance (Artificial Intelligence) contains a lot of information that you can understand it. You can get a lot of help after read this book. This specific book exist new expertise the information that exist in this guide represented the condition of the world currently. That is important to yo7u to be aware of how the improvement of the world. This particular book will bring you throughout new era of the globalization. You can read the e-book with your smart phone, so you can read that anywhere you want.

##### **James Valenzuela:**

Is it an individual who having spare time subsequently spend it whole day simply by watching television programs or just lying on the bed? Do you need something new? This Legged Robots That Balance (Artificial Intelligence) can be the response, oh how comes? The new book you know. You are therefore out of date, spending your spare time by reading in this new era is common not a nerd activity. So what these ebooks have than the others?

##### **Crystal Babin:**

A lot of people said that they feel bored stiff when they reading a publication. They are directly felt it when they get a half parts of the book. You can choose often the book Legged Robots That Balance (Artificial Intelligence) to make your own reading is interesting. Your own skill of reading skill is developing when you such as reading. Try to choose basic book to make you enjoy to learn it and mingle the impression about book and reading especially. It is to be initially opinion for you to like to open up a book and read it. Beside that the reserve Legged Robots That Balance (Artificial Intelligence) can to be a newly purchased friend

when you're sense alone and confuse with what must you're doing of these time.
