### Architecture for Astronauts: An Activity-based Approach (Springer Praxis Books) By Sandra Häuplik-Meusburger

The first part of this book introduces all relevant American and Russian realized extra-terrestrial habitats: The Apollo Spacecraft and Lunar Module, the Space Shuttle Orbiter, and the Space Stations; Salyut, Skylab, Mir, as well as the International Space Station. It provides an overview of the architecture and configuration, highlights specific issues concerning the interior layout and compares the spatial and time allocation of human activities. Drawings and diagrams facilitate comparison.

The main part of the book concentrates on the investigation of the relationship between the environment and its users. This method evaluates and summarizes all the selected habitats by means of the human activities in relation to the characteristics of the built environment (Sleep, Hygiene, Food, Work and Leisure). In addition to analyzing the available data, it integrates the astronauts' personal experiences into the evaluation.

The author conducted structured interviews with astronauts with a special focus on human activity. The book confronts the findings from relevant literature and analysis - based on crew transcripts, spacecraft drawings and mission images - with the personal experiences of the users: the astronauts and cosmonauts. To facilitate orientation and to ease comparison with architectural drawings and diagrams each category was assigned a specific colour. Design directions for each category conclude each chapter.

### **Editorial Review**

Review

From the reviews:

“Sandra Häuplik-Meusburger’s work, *Architecture for Astronauts: An Activity-Based Approach*, contributes to this effort through an architectural exploration of habitats and the needs of astronauts in undertaking longer, more complicated voyages than ever before. ... This is an intelligent, challenging book ... useful for designers and architects, engineers, and other professionals.” (Roger D. Launius, *Quest: The History of Spaceflight*, Vol. 19 (4), 2012)

From the Back Cover

Living and working in extra-terrestrial habitats means being potentially vulnerable to very harsh environmental, social, and psychological conditions. With the stringent technical specifications for launch vehicles and transport into space, a very tight framework for the creation of habitable space is set. These constraints result in a very demanding “partnership” between the habitat and the inhabitant.

This book is the result of researching the interface between people, space and objects in an extra-terrestrial environment. The evaluation of extra-terrestrial habitats in comparison to the user’s perspective leads to a new framework, comparing these buildings from the viewpoint of human activity. It can be used as reference or as conceptual framework for the purpose of evaluation. It also summarizes relevant human-related design directions. The work is addressed to architects and designers as well as engineers.

### **Users Review**

**From reader reviews:**

**Michael Johnson:**

This *Architecture for Astronauts: An Activity-based Approach* (Springer Praxis Books) book is just not ordinary book, you have after that it the world is in your hands. The benefit you receive by reading this book is definitely information inside this e-book incredible fresh, you will get data which is getting deeper a person read a lot of information you will get. This kind of *Architecture for Astronauts: An Activity-based Approach* (Springer Praxis Books) without we know teach the one who studying it become critical in considering and analyzing. Don't always be worry *Architecture for Astronauts: An Activity-based Approach* (Springer Praxis Books) can bring whenever you are and not make your case space or bookshelves' become full because you can have it within your lovely laptop even cell phone. This *Architecture for Astronauts: An Activity-based Approach* (Springer Praxis Books) having great arrangement in word and layout, so you will not really feel uninterested in reading.

**Bradley Smith:**

Nowadays reading books become more than want or need but also become a life style. This reading practice give you lot of advantages. The advantages you got of course the knowledge the actual information inside the book in which improve your knowledge and information. The details you get based on what kind of book you read, if you want have more knowledge just go with knowledge books but if you want truly feel happy read one having theme for entertaining such as comic or novel. The particular Architecture for Astronauts: An Activity-based Approach (Springer Praxis Books) is kind of e-book which is giving the reader unforeseen experience.

**Amy Terrell:**

People live in this new moment of lifestyle always aim to and must have the free time or they will get great deal of stress from both everyday life and work. So , once we ask do people have free time, we will say absolutely of course. People is human not really a huge robot. Then we consult again, what kind of activity do you have when the spare time coming to an individual of course your answer will unlimited right. Then ever try this one, reading books. It can be your alternative throughout spending your spare time, typically the book you have read is Architecture for Astronauts: An Activity-based Approach (Springer Praxis Books).

**Kelly Edge:**

Your reading 6th sense will not betray a person, why because this Architecture for Astronauts: An Activity-based Approach (Springer Praxis Books) publication written by well-known writer who knows well how to make book that could be understand by anyone who have read the book. Written within good manner for you, dripping every ideas and composing skill only for eliminate your hunger then you still question Architecture for Astronauts: An Activity-based Approach (Springer Praxis Books) as good book not only by the cover but also from the content. This is one e-book that can break don't judge book by its deal with, so do you still needing a different sixth sense to pick that!?! Oh come on your reading sixth sense already said so why you have to listening to one more sixth sense.
