**Microwave and RF Engineering** By Roberto Sorrentino, Giovanni Bianchi

**An essential text for both students and professionals, combining detailed theory with clear practical guidance**

This outstanding book explores a large spectrum of topics within microwave and radio frequency (RF) engineering, encompassing electromagnetic theory, microwave circuits and components. It provides thorough descriptions of the most common microwave test instruments and advises on semiconductor device modelling.

With examples taken from the authors' own experience, this book also covers:

- network and signal theory;
- electronic technology with guided electromagnetic propagation;
- microwave circuits such as linear and non-linear circuits, resonant circuits and cavities, monolithic microwave circuits (MMICs), wireless architectures and integrated circuits;
- passive microwave components, control components;
- microwave filters and matching networks.
- Simulation files are included in a CD Rom, found inside the book.

*Microwave and RF Engineering* presents up-to-date research and applications at different levels of difficulty, creating a useful tool for a first approach to the subject as well as for subsequent in-depth study. It is therefore indispensable reading for advanced professionals and designers who operate at high frequencies as well as senior students who are first approaching the subject.

About the Author

**Roberto Sorrentino** received the *Laurea* degree in Electronic Engineering from the University of Rome “La Sapienza”, Rome, Italy, in 1971, where he was an Associate Professor until 1986. From 1986 to 1990 he was a Professor at the University of Rome “Tor Vergata”. Since 1990 he has been a Professor at the University of Perugia, Perugia, Italy. He has authored and co-authored over 100 technical papers in international journals, 300 refereed conference papers and three books in the area of the analysis and design of microwave passive circuits and antennas. He is an IEEE Fellow (1990), a recipient of the IEEE Third Millennium Medal (2000) and of the Distinguished Educator Award from IEEE MTT-S (2004). He was the President of the European Microwave Association from 1998 to 2009.

**Giovanni Bianchi** received the *Laurea* degree in Electronic Engineering from the University of Rome “La Sapienza”, Rome, Italy, in 1987. In 1988, he joined the microwave department of Electtronica S.p.A. where he was involved in microwave components (including GaAs MMICs) and subassembly design. He joined Motorola PCS in 2000, where he worked on GSM and WCDMA mobile phone design, and in 2004 joined SDS S.r.L where he was responsible for microwave designs. Since January 2008 he has worked as a R&D Engineer in the hardware/RF division at Verigy, and is an expert in high frequency theory and techniques. In his 23 years of design experience he has covered both passive and active microwave components, including filters, amplifiers, oscillators, and synthesizers. He is the author of four books (including the present one) as well as 12 papers.

### **From reader reviews:**

#### **James Vera:**

Book is usually written, printed, or descriptive for everything. You can realize everything you want by a e-book. Book has a different type. We all know that that book is important point to bring us around the world. Alongside that you can your reading proficiency was fluently. A guide Microwave and RF Engineering will make you to possibly be smarter. You can feel considerably more confidence if you can know about every little thing. But some of you think which open or reading any book make you bored. It is not necessarily make you fun. Why they could be thought like that? Have you seeking best book or suited book with you?

#### **Bettye Heinrich:**

Reading a reserve tends to be new life style in this era globalization. With reading through you can get a lot of information that may give you benefit in your life. Having book everyone in this world could share their idea. Ebooks can also inspire a lot of people. Lots of author can inspire all their reader with their story or even their experience. Not only the story that share in the books. But also they write about the data about something that you need instance. How to get the good score toefl, or how to teach your sons or daughters, there are many kinds of book that you can get now. The authors on earth always try to improve their expertise in writing, they also doing some research before they write to the book. One of them is this Microwave and RF Engineering.

#### **Teresa Graham:**

Beside this kind of Microwave and RF Engineering in your phone, it may give you a way to get closer to the new knowledge or information. The information and the knowledge you may got here is fresh from your oven so don't become worry if you feel like an outdated people live in narrow small town. It is good thing to have Microwave and RF Engineering because this book offers for your requirements readable information. Do you sometimes have book but you don't get what it's all about. Oh come on, that would not happen if you have this with your hand. The Enjoyable set up here cannot be questionable, such as treasuring beautiful island. So do you still want to miss this? Find this book as well as read it from currently!

#### **Anne Simons:**

A lot of guide has printed but it is unique. You can get it by world wide web on social media. You can choose the most effective book for you, science, amusing, novel, or whatever by searching from it. It is called of book Microwave and RF Engineering. You can contribute your knowledge by it. Without causing the printed book, it can add your knowledge and make you actually happier to read. It is most important that, you must aware about book. It can bring you from one location to other place.
