Sustainable Engineering: Concepts, Design and Case Studies By David T. Allen, David R. Shonnard

Assessing Engineering Designs for Environmental, Economic, and Social Impact

Engineers will play a central role in addressing one of the twenty-first century's key challenges: the development of new technologies that address societal needs and wants within the constraints imposed by limited natural resources and the need to protect environmental systems.

To create tomorrow's sustainable products, engineers must carefully consider environmental, economic, and social factors in evaluating their designs. Fortunately, quantitative tools for incorporating sustainability concepts into engineering designs and performance metrics are now emerging. *Sustainable Engineering* introduces these tools and shows how to apply them.

Building on widely accepted principles they first introduced in *Green Engineering*, David T. Allen and David R. Shonnard discuss key aspects of designing sustainable systems in any engineering discipline. Their powerful, unified approach integrates essential engineering and quantitative design skills, industry perspectives, and case studies, enabling engineering professionals, educators, and students to incorporate sustainability throughout their work. Coverage includes

- A concise review of the natural resource and environmental challenges engineers face when designing for sustainability
- Analysis and legislative frameworks for addressing environmental issues and sustainability
- Methods for identifying green and sustainable materials
- Principles for improving the sustainability of engineering designs
- Tools for evaluating sustainable designs and monetizing their benefits

Sustainable Engineering: Concepts, Design and Case Studies By David T. Allen, David R. Shonnard **Bibliography**

- Rank: #535322 in Books
- Brand: Brand: Prentice Hall
- Published on: 2011-12-30
- Released on: 2011-12-20
- Original language: English
- Number of items: 1
- Dimensions: 9.00" h x .60" w x 6.90" l, .80 pounds
- Binding: Paperback
- 240 pages

Editorial Review

About the Author

Dr. David T. Allen is the Gertz Regents Professor of Chemical Engineering, and the director of the Center for Energy and Environmental Resources, at the University of Texas at Austin. He is the author of multiple books and hundreds of scientific papers in areas ranging from coal liquefaction and heavy oil chemistry to the chemistry of urban atmospheres. The quality of his work has been recognized by research awards from the National Science Foundation, the AT&T Foundation, the American Institute of Chemical Engineers, the Association of Environmental Engineering and Science Professors, and the State of Texas. The findings from his research have been used to guide air quality policy development, and he has served on the U.S. EPA's Science Advisory Board and the National Research Council's Board on Environmental Studies and Toxicology, addressing issues at the interface between science, engineering, and public policy. For the past two decades, his work has also focused on the development of materials for environmental education, including coauthoring the textbook *Green Engineering: Environmentally Conscious Design of Chemical Processes*. He has won teaching awards at the University of Texas and UCLA. Dr. Allen received his B.S. in chemical engineering, with distinction, from Cornell University in 1979. His M.S. and Ph.D. degrees in chemical engineering were awarded by the California Institute of Technology in 1981 and 1983. He has held visiting faculty appointments at the California Institute of Technology, the University of California, Santa Barbara, and the Department of Energy.

Dr. David R. Shonnard is Robbins Professor in the Department of Chemical Engineering at Michigan Technological University and director of the Sustainable Futures Institute. He received a B.S. in chemical/metallurgical engineering from the University of Nevada, Reno, in 1983; an M.S. in chemical engineering from the University of California, Davis, in 1985; a Ph.D. from the University of California, Davis, in 1991; postdoctoral training in bioengineering at the Lawrence Livermore National Laboratory from 1990 to 1993; and he was a visiting instructor at the University of California at Berkeley in 2003. His experiences in life-cycle assessment (LCA) methods and applications include a one-year sabbatical at the Eco-efficiency Analysis Group at BASF AG in Ludwigshafen, Germany. He has been on the faculty in the Department of Chemical Engineering at Michigan Technological University since 1993. Dr. Shonnard has more than twenty years of academic experience in sustainability issues in the chemical industry and Green Engineering. He is coauthor of the textbook *Green Engineering: Environmentally Conscious Design of Chemical Processes*, published by Prentice Hall in 2002. His current research interests focus on investigations of new forest-based biorefinery processes for production of transportation fuels, such as cellulosic ethanol and pyrolysis-based biofuels, from woody biomass using recombinant DNA and other approaches. Another active research area is LCA of biofuels and other biorefinery products to determine greenhouse gas emissions and net energy balances. He has contributed to National Academy of Sciences publications on green chemistry/engineering/sustainability in the chemical industry. Dr. Shonnard has coauthored 70 peer-reviewed publications and received numerous honors and awards for teaching and research into environmental issues of the chemical industry, including the Ray W. Fahien Award from ASEE (2003). He is a recipient of the NSF/Lucent Technologies Foundation Industrial Ecology Research Fellowship (1998) for research that integrates environmental impact assessment with process design.

Users Review

From reader reviews:

Bobbie Flores:

What do you consider book? It is just for students since they are still students or the idea for all people in the world, the actual best subject for that? Merely you can be answered for that query above. Every person has different personality and hobby for every single other. Don't to be pushed someone or something that they don't want do that. You must know how great along with important the book Sustainable Engineering: Concepts, Design and Case Studies. All type of book would you see on many solutions. You can look for the internet solutions or other social media.

Terry Kiser:

The feeling that you get from Sustainable Engineering: Concepts, Design and Case Studies may be the more deep you rooting the information that hide within the words the more you get enthusiastic about reading it. It does not mean that this book is hard to know but Sustainable Engineering: Concepts, Design and Case Studies giving you joy feeling of reading. The article writer conveys their point in particular way that can be understood through anyone who read that because the author of this publication is well-known enough. This kind of book also makes your personal vocabulary increase well. Making it easy to understand then can go with you, both in printed or e-book style are available. We suggest you for having this kind of Sustainable Engineering: Concepts, Design and Case Studies instantly.

Manuel Arndt:

Typically the book Sustainable Engineering: Concepts, Design and Case Studies has a lot info on it. So when you check out this book you can get a lot of benefit. The book was published by the very famous author. The author makes some research just before write this book. That book very easy to read you will get the point easily after reading this article book.

Mike Hart:

This Sustainable Engineering: Concepts, Design and Case Studies is great e-book for you because the content that is certainly full of information for you who always deal with world and possess to make decision every minute. This kind of book reveal it info accurately using great arrange word or we can say no rambling sentences in it. So if you are read the idea hurriedly you can have whole data in it. Doesn't mean it only provides straight forward sentences but tricky core information with splendid delivering sentences. Having Sustainable Engineering: Concepts, Design and Case Studies in your hand like finding the world in your arm, facts in it is not ridiculous just one. We can say that no book that offer you world within ten or fifteen moment right but this reserve already do that. So , this can be good reading book. Hey Mr. and Mrs. occupied do you still doubt which?
